DETAILED ACTION

1. This office action is responsive to the amendment filed on 8/25/2005.
2. The indicated allowability of claims 32-35 is withdrawn in view of the newly discovered reference(s) to Erkocevic. Rejections based on the newly cited reference(s) follow.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1, 2, 6, 7, 9-11, 23-25, and 30-35 are rejected under 35 U.S.C. 102(b) as being anticipated by Erkocevic (US Patent 5,420,599).

Erkocevic discloses, in figures 1-3, an antenna apparatus for use in a radio communication system comprising a ground plane 44, a diversity antenna arrangement including a pair of antenna elements (20,22), each antenna element including a generally L-shaped radiating element, a feed leg portion (36 or 38), and a short-circuiting (32 or 34). Since the antenna elements have the same shape and dimension, it is inherent they produce the same resonant frequency.

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and

Art Unit: 2821

the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 3-5 and 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Erkocevic.

The patent to Erkocevic, described above, differs from the claimed invention because it does not teach a matching circuit coupled to the feed arrangement of the antenna element. However, the matching circuit for providing matching impedance of the antenna system is well known in the art, and therefore it represents an obvious expedient.

Allowable Subject Matter

7. Claims 12-22, and 26-29 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
